ACCESSION VERSION KEYWORDS RESULT 13 HS193B12/c DEFINITION HS193B12 100375 bp DNA PRI 23-NOV-1999
Human DNA sequence from PAC 193B12 on chromosome 6p21.3-22.3.
Contains histone Pt2h/d, H2B/d, H2A.1, H1.5, H3.F, H4.k, H3/f
genes, histone Pt2b.1 and hypothetical protein A4 pseudogenes,
histone H2A.1 and H2B.2 duplicate genes, Glycine (GGC) tRNA gene,
olfactory receptor OL1 like gene, ESTs STSs and predicted CpG Z98744.1 GI:3080457 6p21.3-22.3; A4; CpG island; Glycine tRNA; H1.5; H2A; H2A.1; H2A.1; H2A/d; H2B; H2B.2; H2B/d; H3; H3.1; H3.F; H3/j; H4; H4.K; h1stone;

COMMENT

(http://wwwsanger.ac.uk/HGP/Chr6/) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquires: humquery@sanger.ac.uk Clone requests: colonerequest@sanger.ac.uk on Apr 24, 1998 this sequence version replaced gi:2578067.
IMPORTANT: This sequence is the entire insert of clone 193B12.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variations annotated may not be found in the sequence submission corresponding to the overlapping clone as we submit sequences with Submitted (12-DEC-1997) Chromosome 6 Project Group Direct Submission

only a small overlap as described above.
This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed in collaboration by the Sanger Centre chromosome 6 mapping group and Armin Volz & Andreas Ziegler,

according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key.

The true left end of clone 193B12 is at 1 in this sequence. The David Ruddy, Jeffrey Gruen.

Further information can be found at http://www.sanger.ac.uk/HGP/Chr6/ This sequence has been finished

It currently consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        as soon as it is available and the accession number will be preserved.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NOTE: This is a 'working draft' sequence. It currentle consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Insert size: 176000; agarose-fp Insert size: 174877; sum-of-contigs Quality coverage: 4.5 in Q20 bases; Quality coverage: 4.6 in Q20 bases;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SXCCCCCCXXXTTXXX

New human G protein-coupled receptor and polynucleotides encoding the receptor, useful in identifying, selecting or validating new molecular targets for drug discovery and in diagnostic or prognostic assays 65pp; English.

The sequence represents the coding sequence of novel human G-protein coupled receptor (NGPCR). The NGPCR nucleic acid and protein are useful in identifying, selecting or validating novel molecular targets for drug discovery, as well as in diagnostic or prognostic assays. These are also useful in microarrays or other assay formats, for screening collections of genetic material from patients who have a particular medical condition or for identifying mutations associated with a particular disease. condition

New human G protein-coupled receptor and polynucleotides encoding receptor, useful in identifying, selecting or validating new molectargets for drug discovery and in diagnostic or prognostic assays molecular

Disclosure; Page 62-63; 65pp; English.

The sequence represents the open reading frame (ORF) encoding novel human G-protein coupled receptor (NGPCR). The NGPCR nucleic acid and protein are useful in identifying, selecting or validating novel molecular targets for drug discovery, as well as in diagnostic or prognostic assays. These are also useful in microarrays or other assay formats, for screening collections of genetic material from patients who have a particular medical condition or for identifying mutations associated with particular disease.

New polynucleotides sensation for identi otides which identifying 1857pp; encode polypeptides olfactory agonists a s involved in olfactory and antagonists -

which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary sensts and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detection of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of olfaferences in the olfactory faculties. faculties

polynucleotides which encode polypeptides involved in olfactory sation for identifying olfactory agonists and antagonists -

Claim Page 273-274; 1857pp; English.

scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors and can be used for determining differences in the olfactory faculties which encode polypeptides involved in olfactory sensation. polynucleotides can be used in screening for olfactory ago antagonists. The methods allow for the determination of pr and can be used for deter of different individuals. sequence is one of a number of isolated polynucleotides agonists and primary

                                           scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptor and can be used for determining differences in the olfactory faculties of olfactory the olfactory faculties.
                                                                                                                                                                                                                                                                                               The present sequence is one of a number of isolated polynucleotides which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary

The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim

New polynucleotides sensation for identi tides which identifying encode polypeptides olfactory agonists a s involved in ol and antagonists olfactory sts -

Claim 8 Page 530; 1857pp; English.

The present sequence is one of a number of isolated polynucleotides which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to these primary scents. The methods also enable the identification of determination o detect

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent figerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different individuals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 939

KW Sec The present sequence is one of a number of isolated polynucleotides which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptor and can be used for determining differences in the olfactory faculties of different individuals.

Sequence 936 BP; 222 A; 226 C; 188 ç; 300 T; 0 other;

The present sequence is one of a number of isolated polynucleotides which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptor and can be used for determining differences in the olfactory faculties

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        612
```

The present sequence is one of a number of isolated polynucleotides which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors and can be used for determining differences in the olfactory faculties different individuals.

                                                                                                                                                                                                                                                            which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (DIGI-)
